Technical Questions

What is the difference between a database and a data warehouse Answer A database is designed to efficiently handle transactions and store real time data typically structured to support CRUD operations Create Read Update Delete A data warehouse on the other hand is designed for analytical purposes and is optimized for reading and aggregating large volumes of historical data Data warehouses support complex queries and reporting needs

Explain the ETL process Answer ETL stands for Extract Transform Load It is a process used to move data from source systems to a data warehouse

Extract Data is extracted from various source systems

Transform The extracted data is transformed into a suitable format or structure for querying and analysis This may involve cleaning filtering and aggregating the data

Load The transformed data is loaded into the target data warehouse

What is the difference between supervised and unsupervised learning Answer Supervised learning involves training a model on labelled data meaning the model learns from input output pairs to make predictions Examples include regression and classification tasks Unsupervised learning on the other hand deals with unlabelled data and aims to find hidden patterns or intrinsic structures within the data such as clustering and association tasks

How would you handle missing data in a dataset Answer Handling missing data can be done in several ways

Deletion Removing rows or columns with missing values if they are not crucial or if the proportion of missing data is small

Imputation Filling in missing values using various methods such as mean median mode or more sophisticated techniques like K Nearest Neighbours KNN imputation or regression imputation

Prediction Models Using machine learning models to predict and fill in missing values based on other available data

What is a JOIN in SQL Describe different types of JOINS Answer A JOIN in SQL is used to combine rows from two or more tables based on a related column between them

Types of JOINS include

INNER JOIN Returns only the rows with matching values in both tables

LEFT JOIN LEFT OUTER JOIN Returns all rows from the left table and matched rows from the right table Unmatched rows from the left table will have NULLs for columns from the right table

RIGHT JOIN RIGHT OUTER JOIN Returns all rows from the right table and matched rows from the left table Unmatched rows from the right table will have NULLs for columns from the left table

FULL JOIN FULL OUTER JOIN Returns all rows when there is a match in either table Unmatched rows will have NULLs from the other table

CROSS JOIN Returns the Cartesian product of the two tables meaning all possible combinations of rows

Analytical Questions

How would you approach a data analysis project Answer My approach to a data analysis project involves several steps

Define the Objective Understand the business problem or goal

Data Collection Gather data from relevant sources

Data Cleaning Prepare the data by handling missing values removing duplicates and correcting errors

Exploratory Data Analysis EDA Analyse the data to find patterns trends and insights using statistical methods and

visualizations Modelling Apply statistical or machine learning models to the data Interpretation Interpret the results in the context of the business problem Communication Present findings in a clear and concise manner often using visualizations and summary reports Actionable Insights Provide recommendations based on the analysis Describe a time when you used data to make a business decision Answer In my previous role we were experiencing a drop in customer retention I conducted a cohort analysis to identify patterns and trends among different customer segments The analysis revealed that customers who engaged with our new user tutorial had significantly higher retention rates Based on these findings we decided to improve and promote the tutorial feature which ultimately led to a 15% increase in retention over the next quarter

Describe a challenging data analysis problem you faced and how you solved it Answer In one project I encountered a dataset with significant missing values and inconsistencies To address this I first performed a thorough data audit to understand the extent of the issues I then used a combination of imputation techniques for missing data and developed scripts to standardize and clean the data After ensuring the data quality I was able to proceed with the analysis which provided critical insights for our marketing strategy

Soft Skills Questions How do you communicate complex technical information to a non technical audience Answer I focus on simplifying complex concepts by using analogies and avoiding jargon Visualizations like charts and graphs can help convey data insights more clearly I also tailor my message to the audience s level of understanding and emphasize the implications of the data rather than the technical details For instance instead of explaining the intricacies of a machine learning algorithm I would highlight the predicted outcomes and their potential impact on the business
