George G. Roussas,1997-02-28 A Course in Mathematical Statistics Second Edition contains enough material for a year long  
course in probability and statistics for advanced undergraduate or first year graduate students or it can be used  
independently for a one semester or even one quarter course in probability alone It bridges the gap between high and  
intermediate level texts so students without a sophisticated mathematical background can assimilate a fairly broad spectrum  
of the theorems and results from mathematical statistics The coverage is extensive and consists of probability and  
distribution theory and statistical inference Contains 25% new material Includes the most complete coverage of sufficiency  
Transformation of Random Vectors Sufficiency Completeness Exponential Families Order Statistics Elements of

Parametric Inference discusses the basic concept of sufficient statistic and the classical approach based on minimum variance unbiased estimator There is a separate chapter on simultaneous estimation of several parameters Large sample theory of estimation based on consistent asymptotically normal estimators obtained by method of moments percentile and the method of maximum likelihood is also introduced The tests of hypotheses for finite samples with classical Neyman Pearson theory is developed pointing out its connection with Bayesian approach The hypotheses testing and confidence interval techniques are developed leading to likelihood ratio tests score tests and tests based on maximum likelihood estimators
