Versatile Routing and Services with BGP Alcatel-Lucent, Colin Bookham, 2014-01-29 Design a robust BGP control plane within a secure scalable network for smoother services A robust Border Gateway Protocol setup is vital to ensuring reliable connectivity an essential capability for any organization The Internet has become a necessary always on service in homes and businesses and BGP is the protocol that keeps communication flowing But BGP also has become crucial to delivery of intra domain business services But the network is only as reliable as BGP so service enablement depends upon making BGP more stable reliable and service rich Alcatel Lucent Service Router Operating System is engineered to bear the load of the most demanding networks The system features support for Symmetric Multiprocessing and unprecedented depth of advanced routing features all within a single OS that is supported across the entire Alcatel Lucent IP MPLS router portfolio Versatile Routing and Services with BGP provides guidance toward implementation of BGP within SR OS and details the use and control of each feature The book provides in depth coverage of topics such as BGP MPLS IP VPN VPLS VPWS Labeled Unicast IPv4 reconvergence and multicast Security graceful restart and error handling IPv6 PE 6PE and IPv6 extensions to BGP MPLS IP VPN A look at forthcoming features such as Ethernet VPN Basic BGP competency is assumed but the book is

accessible even to those with zero familiarity with Alcatel Lucent's SR OS. It underscores the idea that BGP is more than just service enablement and can also be used for infrastructure layer transport but both layers must be solid, scalable, and able to quickly reconverge. Versatile Routing and Services with BGP demonstrates the creation of a robust BGP control plane within a secure network allowing the delivery of flawless, uninterrupted service. *Internet Routing Architectures* Bassam Halabi, Sam Halabi, Danny McPherson, 2000. Explores the functions, attributes, and applications of BGP 4. Border Gateway Protocol Version 4: the de facto interdomain routing protocol through practical scenarios and configuration examples.

BGP Secure Routing Extension (BGP-SRx) Oliver Borchert, 2021. In this paper, we first describe the problem space. Following that, we describe the design and implementation of the NIST reference implementation for RPKI-based route origin validation (BGP-ROV) and BGPsec path validation (BGP-PV) within a BGP router. The system we developed is called BGP Secure Routing Extension (BGP-SRx). We describe the system design, explain the design choices, communications between all components, and present the performance measurements obtained during the implementation stages. This paper is organized so that it first explains the high-level system design with a brief explanation of all components and how they interact. We will explain why we chose this design and provide a discussion of its benefits as well as shortcomings. Furthermore, we show which open-source components we chose and how we extended them for this project. The BGP-SRx implementation is a reference implementation for RPKI-ROV with all its router-side components as specified in RFC 6811, RFC 6810, and RFC 8210, as well as for BGPsec path validation as specified in RFC 8205 and RFC 8608. The implementation allowed early identification of issues while the specifications were still under development, hence providing important feedback to the development of the different IETF RFCs.
