Robotic Process Automation (RPA) in a company. Success factors and recommendations for the start Björn Freivogel, 2022-02-07
Document from the year 2020 in the subject Computer Science, Commercial Information Technology, language English, abstract. Numerous tasks in a company follow a structured process and could be automated. However, they occur too rarely to justify the automation effort. Robotic Process Automation (RPA) aims to change this. By having a robot emulate the input on an existing user interface, no changes are required in the target application. Automation is possible in a timely and cost-effective manner. So far, many companies have had positive experiences with RPA. However, there are also a number of failed projects. What factors determine success and failure when introducing an RPA system? Björn Freivogel explains how the introduction of robotic process automation succeeds. He first gives an overview of the topic of RPA and presents the features and functionality of RPA systems. Based on this, he examines which properties suitable processes should have and how important it is to systematically select process candidates. In his publication, Freivogel not only summarizes the theoretical basics but also gives practical recommendations for the introduction of RPA in the company.

The Impact of ERP on the Effectiveness of Business Process Management Shorouk Sherif,2019-03-22 Research Paper undergraduate from the year 2018 in the subject Computer Science Commercial Information Technology grade A German University in Cairo language English abstract Enterprise Resource Planning ERP is a software that consists of a group of applications and tools that aim mainly to monitor business functions operations and processes across an organization providing reliable information to different units of the company such as finance and accounting sales and distribution human resources and others In addition with the daily evolution of information technology the ERP system has been progressing and building itself for the last two decades until it took the shape we all know now On the other hand Business Process

Management BPM can be identified as the discipline that reaches for the maximum control and management of organizational structure and format of the business processes which eventually leads to enhanced business process management. This research paper is exploring the impact of ERP on the effectiveness of business process management by evaluating ERP potential development on business processes and how automation provided by ERP would affect these processes. In addition, this study aims to demonstrate the functionalities of ERP and their possible positive effect the system may have on business performance even though some studies argue that not all ERP implementation projects succeed. The paper is organized as follows: the first section will discuss ERP's definition, evolution, and history; functionalities, the implementation stages of ERP systems, benefits of ERP and the cloud ERP and its types. The second section will discuss the definition of business processes management. In addition, the BPM methodologies including business process architecture, how to make the right choice for methodology and process classification framework. The last section will discuss and explore how investing in ERP can improve BPM by explaining the budget, time, and plan needed for ERP systems and business processes re-engineering and system integration to match with the ERP systems. Also, this section includes benefits and risks of ERP on BPM by evaluating ERP effectiveness and efficiency and assessing risks.
