Computer Networking Olivier Bonaventure, 2011 This open textbook aims to fill the gap between the open source implementations and the open source network specifications by providing a detailed but pedagogical description of the key principles that guide the operation of the Internet The book is released under a creative commons license Such an open source license is motivated by two reasons The first is that we hope that this will allow many students to use the book to learn computer networks The second is that I hope that other teachers will reuse adapt and improve it Time will tell if it is possible to build a community of contributors to improve and develop the book further As a starting point the first release

contains all the material for a one semester first upper undergraduate or a graduate networking course

Computer Network Architectures and Protocols Paul Eliot Green,1982 This is a book about the bricks and mortar out of which are built those edifices that so well characterize late twentieth century industrial society networks of computers and terminals Such computer networks are playing an increasing role in our daily lives somewhat indirectly up to now as the hidden servants of banks retail credit bureaus airline reservation offices and so forth but soon they will become more visible as they enter our offices and homes and directly become part of our work entertainment and daily living The study of how computer networks work is a combined study of communication theory and computer science two disciplines appearing to have very little in common The modern communication scientist wishing to work in this area finds himself in suddenly unfamiliar territory It is no longer sufficient for him to think of transmission modulation noise immunity error bounds and other abstractions of a single communication link he is dealing now with a topologically complex interconnection of such links And what is more striking solving the problems of getting the signal from one point to another is just the beginning of the communication process The communication must be in the right form to be routed properly to be handled without congestion and to be understood at the right points in the network The communication scientist suddenly finds himself charged with responsibility for such things as code and format conversions addressing flow control and other abstractions of a new and challenging kind
