Contemporary Management of Intracranial Metastatic

Disease Sunit Das, Arjun Sahgal, 2019-10-17 The development of intracranial metastatic disease IMD complicates the course of 20% of patients with cancer. Despite improvements in patient survival with more aggressive treatment options as compared to the prior standard of palliative whole brain radiation, outcomes for patients who develop IMD remain dispiriting. There is need to celebrate our advances but a major collaborative multidisciplinary effort is needed to push the field to achieve more meaningful survival benefits for our patients with IMD. In this Research Topic collection we have assembled work detailing the latest innovations in brain metastases imaging and management spanning from minimally invasive surgery to immunotherapy. We hope that you find it a valuable resource.
