The European Union and Digital Law Yuval Reinfeld, Aviv Gaon, 2025-10-28 This book introduces the concept of Technical Normative Power (TNP) to explain how the European Union (EU) transforms internal legal frameworks into external influence. Over the past two decades, the EU has emerged as a global regulatory force in the digital age. As technologies such as big data, cloud computing, and generative artificial intelligence reshape modern life, the EU has responded with a legal model grounded in rights-based governance, institutional coherence, and judicial authority. This book focuses on two emblematic instruments: the General Data Protection Regulation (GDPR) and the Artificial Intelligence Act (AIA). It examines how both EU legislation and the case law of the Court of Justice of the European Union (CJEU) work together to set global standards in data protection, AI governance, and digital rights. The EU's ability to combine legal consistency, regulatory ambition, and market access has made it a key actor in shaping the global digital order. Structured in three parts, the book traces the evolution of EU digital regulation, analyzes the mechanisms of its legal and institutional architecture, and evaluates its impact on global governance. This book will be of interest to scholars, students, and professionals in EU law, digital regulation, artificial intelligence, and the law of emerging technologies.

Artificial Intelligence Kerrigan, Charles, 2022-03-17 This timely book provides an extensive overview and analysis of the law and regulation as it applies to the technology and uses of Artificial Intelligence (AI). Recreating Creativity, Reinventing Inventiveness Nikos Koutras, Niloufer Selvadurai, 2024-04-02 As artificial intelligence (AI) is increasingly used to generate inventions and creative works, a critical question to be addressed is whether intellectual property (IP) laws should protect such works. This book examines the critical question of whether intellectual property laws should protect works generated by artificial intelligence. If we do not wish to use IP laws to protect such works, how can we still support research, development, and innovation in society? If we do wish to use IP laws to protect such works, should the copyright, patents, and other IP rights attach to the human creator of the AI technology or the AI system? The book explores these compelling societal, economic, and legal issues. The authors evaluate the continuing relevance of existing laws, explore the divergent approaches being debated by nations around the world, and present visions for change. The book will enable both lawyers and non-lawyers to reimagine governance frameworks to create laws that equitably balance the interests of creators, investors, and end users of AI-generated works.
