**Automation and Autonomy** James Steinhoff,2021-06-21 This book argues that Marxist theory is essential for understanding the contemporary industrialization of the form of artificial intelligence AI called machine learning It includes a

political economic history of AI tracking how it went from a fringe research interest for a handful of scientists in the 1950s to a centerpiece of cybernetic capital fifty years later It also includes a political economic study of the scale scope and dynamics of the contemporary AI industry as well as a labour process analysis of commercial machine learning software production based on interviews with workers and management in AI companies around the world ranging from tiny startups to giant technology firms On the basis of this study Steinhoff develops a Marxist analysis to argue that the popular theory of immaterial labour which holds that information technologies increase the autonomy of workers from capital tending towards a post capitalist economy does not adequately describe the situation of high tech digital labour today In the AI industry digital labour remains firmly under the control of capital Steinhoff argues that theories discerning therein an emergent autonomy of labour are in fact witnessing labour s increasing automation

**Essays on Longtermism** Hilary Greaves, Jacob Barrett, David  
Thorstad, 2025-09-02 This is an open access title It is available to read and download as a free PDF version on Oxford  
Academic and is made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 International  
licence Longtermism broadly speaking is the view that positively influencing the long term future is one of the key moral  
priorities of our time Calls for taking a long term view towards global problems such as climate change and poverty are  
familiar typically urging us to plan on a scale of decades or perhaps a century By contrast longtermism asks us to take  
seriously the idea that what we should do right now may depend on the effects of our actions thousands even millions of  
years into the future Essays on Longtermism brings together leading scholars to discuss four sets of overlapping questions  
raised by the longtermist approach First should we accept some version of longtermism Second to what extent can we  
predict and control the far future Third which ethical priorities are recommended by longtermism and how revisionary are  
they Finally what implications would longtermism have for the design or reform of social political and legal institutions  
Contributors who include both supporters and critics of longtermism are drawn from a range of disciplines including  
philosophy economics psychology law political science and mathematics and from private industry

**Leadership  
2.0 in processes of a sustainable change** Prof. Dr. Michael Kurwan, 2025-06-30 Document from the year 2025 in the  
subject Leadership and Human Resources Leadership language English abstract In order to successfully implement  
sustainable changes in a company in the context of change processes strong leadership is required at the top of a company  
which should have a great deal of empathy and a sure instinct in order to position the company in the market in the long  
term and profitably In order to successfully shape these sustainable changes it will not be the famous power of the leader of  
the past but will only work with the involvement of employees in the new world of work in the knowledge age which is  
characterized by digitalization and artificial intelligence This new form of leadership is also referred to as Leadership 2.0 in  
which it is important to retain top performers and in particular key personnel in the company in the long term which is a very

challenging leadership task in HR management In change processes a fundamental distinction must be made between incremental change management and radical change management While incremental change takes place continuously and is integrated into everyday working life radical change represents a strategic realignment of the company which is largely associated with staff reductions and is intended to change the corporate culture This is particularly true in the case of restructuring where cost cutting programs play a decisive role in ensuring the long term survival of the company Employees are more willing to go along with incremental change also known as continuous improvement than radical change as they could also be affected by staff cuts This fuels employees fears and therefore often leads to high staff turnover
