Whitaker's Books in Print, 1998 Indian National Bibliography B. S. Kesavan, 2012-05 *The Emerging Domain of Cooperating Objects* Pedro José Marron, Stamatis Karnouskos, Daniel Minder, Aníbal Ollero, 2011-01-19 There are a number of different system concepts that have gained much relevance in the area of embedded systems over the past couple of years. First there is the classic concept of embedded systems where the focus is on control systems for physical processes. Secondly, the notion of pervasive computing has evolved where the vision foresees everyday objects having some form of computation capacity and in most cases sensing and communication facilities. Thirdly, the notion of wireless sensor networks has arisen where small computing devices are able to sense their environment and cooperate in order to achieve a well-defined goal. These three types of quite diverse systems share a lot of commonalities on the one hand and on the other hand have some complementary aspects in common that make a combination of these systems into a coherent system vision promising. In particular, the important notions of control heterogeneity, wireless communication, dynamic and ad hoc nature, and cost are prevalent to various degrees in each of these systems. A future system concept needs to combine the strong points of all three system concepts in at least these functional aspects. It has to provide support for the control of physical processes like today's embedded systems do, have as good support for device heterogeneity and spontaneity of usage as required by pervasive and ubiquitous computing approaches, and has to be as cost-efficient and wirelessly agile as wireless sensor networks are. These new systems consist therefore of individual entities or objects that jointly strive to reach a common goal which will typically be a goal in sensing or control and are dynamically and loosely federating themselves for cooperation, taking care not to overtax their available resources. This book presents a roadmap to these concepts which are summarized as cooperating objects.

The British National Bibliography Arthur James Wells, 2004 **Competition Law and Regulation of the EU Electronic Communications Sector** Liyang Hou, 2012-09-01 This book brings satisfying definition and clarity to this field at last. Exploring the substantive differences between competition law and sector-specific regulation, after the methodological integration it presents the first detailed analysis of the many hundreds of notifications and Commission letters generated under the Article 7 procedure, identifying the most relevant cases dealing with market definition, market power, and remedies. It compares these decisions with relevant competition law cases and highlights elements with a bearing on sector-specific regulation. It also offers hugely valuable guidance through the vast amount of documents in the Commission's CIRCA database. Topics and issues raised include the following: definition of product markets, delineation of geographic markets, including sub-national differences in practices in relation to assessing single market power and collective market power, and competition problems such as refusal to deal, margin squeeze, non-price discrimination, and excessive pricing. There can be little doubt that this is the new reference point for researchers and practitioners in this domain. By systematically categorizing the concepts and legal criteria and building a solid theoretical framework on the intersection of

competition law and sector specific regulation the author has created a resource that is sure to be welcomed by all those involved in regulation of electronic communications markets and network industries in general academic scholars telecommunications regulators at the EU and Member State levels competition authorities law firms specializing in IT communications law practitioners in IT and telecommunications companies and consultants in the sector The book will also prove very useful for scholars and practitioners in other parts of the world interested in comparing the EU system with their own

Dissertation Abstracts International, 2000 *Forthcoming Books* Rose Army, 1999-08 **Smart Grid Standards** Takuro Sato, Daniel M. Kammen, Bin Duan, Martin Macuha, Zhenyu Zhou, Jun Wu, Muhammad Tariq, Solomon Abebe Asfaw, 2015-02-02 A fully comprehensive introduction to smart grid standards and their applications for developers consumers and service providers The critical role of standards for smart grid has already been realized by world wide governments and industrial organizations There are hundreds of standards for Smart Grid which have been developed in parallel by different organizations It is therefore necessary to arrange those standards in such a way that it is easier for readers to easily understand and select a particular standard according to their requirements without going into the depth of each standard which often spans from hundreds to thousands of pages The book will allow people in the smart grid areas and in the related industries to easily understand the fundamental standards of smart grid and quickly find the building block standards they need from hundreds of standards for implementing a smart grid system The authors highlight the most advanced works and efforts now under way to realize an integrated and interoperable smart grid such as the NIST Framework and Roadmap for Smart Grid Interoperability Standards Release 2.0 the IEC Smart Grid Standardization Roadmap the ISO IEC's Smart Grid Standards for Residential Customers the ZigBee HomePlug's Smart Energy Profile Specification 2.0 IEEE's P2030 Draft Guide for Smart Grid Interoperability of Energy Technology and Information Technology Operation with the Electric Power System EPS and End Use Applications and Loads and the latest joint research project results between the world's two largest economies US and China The book enables readers to fully understand the latest achievements and ongoing technical works of smart grid standards and assist industry utilities vendors academia regulators and other smart grid stakeholders in future decision making The book begins with an overview of the smart grid and introduces the opportunities in both developed and developing countries It then examines the standards for power grid domain of the smart grid including standards for blackout prevention and energy management smart transmission advanced distribution management and automation smart substation automation and condition monitoring Communication and security standards as a whole are the backbone of smart grid and their standards including those for wired and wireless communications are then assessed Finally the authors consider the standards and on going work and efforts for interoperability and integration between different standards and networks including the latest joint research effort between the world's two largest economies US and China A fully comprehensive introduction to smart grid standards and their

applications for developers consumers and service providers Covers all up to date standards of smart grid including the key standards from NIST IEC ISO ZigBee IEEE HomePlug SAE and other international and regional standardization organizations The Appendix summarizes all of the standards mentioned in the book Presents standards for renewable energy and smart generation covering wind energy solar voltaic fuel cells pumped storage distributed generation and nuclear generation standards Standards for other alternative sources of energy such as geothermal energy and bioenergy are briefly introduced Introduces the standards for smart storage and plug in electric vehicles including standards for distributed energy resources DER electric storage and E mobility plug in vehicles The book is written in an accessible style ideal as an introduction to the topic yet contains sufficient detail and research to appeal to the more advanced and specialist reader
