Rivers, 2006 EVIDENCE IN TRAFFIC CRASH INVESTIGATION AND RECONSTRUCTION begins with a detailed description of the entire investigation process The material then graduates into the various phases and levels of investigations showing the levels of training and education normally associated with the levels of investigations and consequently the duties and responsibilities of the investigator and reconstructionist Using narrative schematics and photographs the mechanical inspection process is described in detail by identifying various vehicle parts explanations of their functions and methods of identifying failures Human related factors in traffic crash investigations are discussed at length including the traffic crash viewed as a systems failure Looming vulnerability a recently developed theoretical construct that helps to describe and understand social cognitive organizational and psychological mechanism is described Discussed also is the role of vision in driver performance perception as a four way process perceptions and reactions driver s reaction to stress

and the roles of pathologists medical examiners and coroners in traffic crash reconstruction Who is an expert and expert evidence are described in detail Errors that can occur in the investigation process and the tolerances that should be considered or allowed are explained The manual also discusses the importance of calling upon the skills and advice of occupational specialists such as reconstructionists lawyers traffic engineers pathologists medical examiners and others to assist in the investigation and reconstruction of a crash that will ensure that the objectives of a thorough and complete investigation will be satisfied Considerable effort has been made in the manual to explain how to identify interpret and analyze all forms of highway marks and damages that can be used in the reconstruction of a vehicle related crash As a guide for investigators prosecutors and defense attorneys checkboxes are provided with many of the major topics that can be used as prompts in evaluating the thoroughness of an investigation or for those areas that might or might not need additional coverage at trial or litigation proceedings To meet international requirements mathematical references are described in both English U S and SI metric measurement systems accompanied by various appendices covering symbols and mathematical conversions Finally there is a comprehensive quick find index that takes the reader directly to any topic formulae or subject matter or any combination of these

TRAFFIC ACCIDENT INVESTIGATORS' AND RECONSTRUCTIONISTS' FIELD MEASUREMENTS AND SCALE DIAGRAMS MANUAL R.W. Rivers, 2003-01-01 This new second edition has been prepared to meet the everyday field requirements of traffic accident investigators and reconstructionists who have a responsibility to obtain and document measurements at traffic crash scenes as well as those who have the responsibility to prepare follow up plans or scale drawings from such measurements The manual explains in

detail the various types of situations requiring measurements that can be encountered during the on scene investigation. These are followed by a large variety of examples of how to take measurements and document them in an easily understood and appropriate manner. Examples are accompanied by solutions to problems and in applicable circumstances mathematical solutions are worked out in both the United States Imperial and metric SI measurement systems. The author conveys an authoritative understanding of triangulation coordinate and grid measurements, angles, circles, curves, and includes horizontal and vertical measurements. The book is generously illustrated and the appendices contain the United States to metric conversion tables, mathematical tables, and traffic accident investigation measurement record forms. **Traffic Control**
