Explainable AI: Interpreting, Explaining and Visualizing Deep Learning Wojciech Samek, Grégoire Montavon, Andrea Vedaldi, Lars Kai Hansen, Klaus-Robert Müller, 2019-09-10 The development of intelligent systems that can take decisions and perform autonomously might lead to faster and more consistent decisions A limiting factor for a broader adoption of AI technology is the inherent risks that come with giving up human control and oversight to intelligent machines For sensitive tasks involving critical infrastructures and affecting human well being or health it is crucial to limit the possibility of improper non robust and unsafe decisions and actions Before deploying an AI system we see a strong need to validate its behavior and thus establish guarantees that it will continue to perform as expected when deployed in a real world environment In pursuit of that objective ways for humans to verify the agreement between the AI decision structure and their own ground truth knowledge have been explored Explainable AI XAI has developed as a subfield of AI focused on exposing complex AI models to humans in a systematic and interpretable manner The 22 chapters included in this book provide a timely snapshot of algorithms theory and applications of interpretable and explainable AI and AI techniques that have been proposed recently reflecting the current discourse in this field and providing directions of future development The book is organized in six parts towards AI transparency methods for interpreting AI systems explaining the decisions of AI systems evaluating interpretability and explanations applications of explainable AI and software for explainable AI Cognitive NeuroIntelligence Jia Liu, Si Wu, Ke Zhou, Yiyang Song, 2021-09-23 **Proceedings of the International Field Exploration and Development Conference 2024** Jia'en Lin, 2025-07-07 This book compiles selected papers from the 14th International Field Exploration and Development Conference IFEDC 2024 The work focuses on topics including Reservoir Exploration Reservoir Drilling Completion Field Geophysics Well Logging Petroliferous Basin Evaluation Oil Gas Accumulation Fine Reservoir Description Complex Reservoir Dynamics and Analysis Low Permeability Tight Oil Gas Reservoirs Shale Oil Gas Fracture Vuggy Reservoirs Enhanced Oil Recovery in Mature Oil Fields Enhanced Oil Recovery for Heavy Oil Reservoirs Big Data and Artificial Intelligence Formation Mechanisms and Prediction of Deep Carbonate Reservoirs and other Unconventional Resources The conference serves as a platform not only for exchanging experiences but also for advancing scientific research in oil gas exploration and production The primary audience for this work includes reservoir engineers geological engineers senior engineers enterprise managers and students Computational Intelligence Christophe Sabourin, Juan Julian Merelo, Kurosh Madani, Kevin Warwick, 2019-05-29 This book presents revised and extended versions of the best papers presented at the 9th International Joint Conference on Computational Intelligence IJCCI 2017 held in Funchal Madeira from 1 to 3 November 2017 It focuses on four of the main fields of computational intelligence evolutionary computation fuzzy computation neural computation and cognitive and hybrid systems As well as presenting the recent advances of these areas it provides new and innovative solutions for established researchers and a source of information and

Merging Symbolic and Data-Driven AI for Robot Autonomy Nikos Katzouris, Simona Perri, Mohan Sridharan, Daniele Meli, 2025-09-08 Robots are increasingly being deployed to assist and collaborate with humans in many applications such as medicine navigation and industrial automation To truly collaborate with humans in complex environments robots require advanced cognitive capabilities including the ability to reason with domain specific commonsense knowledge and the noise observations obtained in the presence of partial observability and non deterministic action outcomes Research in Artificial Intelligence AI has resulted in sophisticated symbolic formalisms that use temporal and logic relations to represent commonsense domain knowledge as well as probabilistic data driven frameworks that quantitatively represent uncertainty in the decision making process of robot systems Stand alone symbolic or stochastic AI methods have limitations when applied to robots in complex scenarios Symbolic AI methods reason with relational descriptions of the attributes of the domain and the robot to guide the robot s behavior It is however often computationally intractable to use these methods to reason about uncertainty quantitatively or to operate at the level of granularity required for precise interaction with objects in complex domains Probabilistic and data driven AI methods on the other hand elegantly represent uncertainty quantitatively and provide mechanisms for reasoning and acting at the level of granularity required for interaction with the physical worlds These methods however offer limited expressiveness for complex cognitive concepts

Transparent Data Mining for Big and Small Data Tania Cerquitelli, Daniele Quercia, Frank Pasquale, 2017-05-09 This book focuses on new and emerging data mining solutions that offer a greater level of transparency than existing solutions Transparent data mining solutions with desirable properties e.g effective fully automatic scalable are covered in the book Experimental findings of transparent solutions are tailored to different domain experts and experimental metrics for evaluating algorithmic transparency are presented The book also discusses societal effects of black box vs transparent approaches to data mining as well as real world use cases for these approaches As algorithms increasingly support different aspects of modern life a greater level of transparency is sorely needed not least because discrimination and biases have to be avoided With contributions from domain experts this book provides an overview of an emerging area of data mining that has profound societal consequences and provides the technical background to for readers to contribute to the field or to put existing approaches to practical use

are neural model architectures that compete and exceed classical convolutional neural networks CNNs in computer vision tasks ViT's versatility and performance is best understood by proceeding with a backward analysis In this study we aim to identify analyse and extract the key elements of ViT by backtracking on the origin of Transformer neural architectures TNA We hereby highlight the benefits and constraints of the Transformer architecture as well as the foundational role of self and multi head attention mechanisms We now understand why self attention might be all we need Our interest of the TNA has driven us to consider self attention as a computational primitive This generic computation framework provides flexibility in the tasks that can be performed by the Transformer After a good grasp on Transformers we went on to analyse their vision applied counterpart namely ViT which is roughly a transposition of the initial Transformer architecture to an image recognition and processing context When it comes to computer vision convolutional neural networks are considered the go to paradigm Because of their proclivity for vision we naturally seek to understand how ViT compared to CNN It seems that their inner workings are rather different CNNs are built with a strong inductive bias an engineering feature that provides them with the ability to perform well in vision tasks ViT have less inductive bias and need to learn this convolutional filters by ingesting enough data This makes Transformer based architecture rather data hungry and more adaptable Finally we describe potential enhancements on the Transformer with a focus on possible architectural extensions We discuss some exciting learning approaches in machine learning Our last part analysis leads us to ponder on the flexibility of Transformer based neural architecture We realize and argue that this feature might possibility be linked to their Turing completeness
