ALTERNATIVE THEORIES *Weber's Electrodynamics* Andre Koch Torres Assis,2013-03-14 Great progress has been made in electrical science chiefly in Germany by cultivators of the theory of action at a distance The valuable electrical measurements of W Weber are interpreted by him according to this theory and the electromagnetic speculation which was originated by Gauss and carried on by Weber Riemann F and C Neumann Lorenz etc is founded on the theory of action at a distance but depending either directly on the relative velocity of the particles or on the gradual propagation of something whether potential or force from the one particle to the other The great success which these eminent men have attained in the application of mathematics to electrical phenomena gives as is natural additional weight to their theoretical speculations so that those who as students of electricity turn to them as the greatest authorities in mathematical electricity would probably imbibe along with their mathematical methods their physical hypothesis These physical hypotheses however are entirely alien from the way of looking at things which I adopt and one object which I have in view is that some of those who wish to study electricity may by reading this treatise come to see that there is another way of treating the subject which is no less fitted to explain the phenomena and which though in some parts it may appear less definite corresponds as I think more faithfully with our actual knowledge both in what it affirms and in what it leaves undecided *The Source Book Volume 1* ,1926 **High Energy Physics Index** ,1988 Bulletin Mississippi.
