GPU Parallel Program Development Using CUDA Tolga Soyata,2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN

Architectural Analysis and Performance Characterization of NVIDIA GPUs Using Microbenchmarking

Saktheesh Subramoniapillai Ajeetha,2012 Abstract Emergence of new Graphical Processors for general purpose computing presents new challenges for application developers Graphical Processors vary in terms of number of processor cores per chip processor speed and memory subsystems NVIDIA's CUDA provides a C like abstraction layer for software developers to implement their applications on GPUs often with little knowledge of the underlying hardware and they are forced to work with high level descriptions documented by the manufacturer Substantial knowledge of the hardware architecture will be useful for harvesting the full potential of GPU architectures while trying to solve complex parallel programming problems This work reports the measurements and characterization of performance of several NVIDIA GPU's using micro benchmark analysis Our thesis uses and adapts the CUDA Micro benchmarks 8 and SHOC benchmarks 9 to characterize the important aspects of NVIDIA's GTX200 series GPU architecture machine GTX280 and Fermi series architecture machines GTX580 Tesla C2050 The investigation is conducted by performing a micro architectural analysis of these machines and comparing their basic performance parameters This thesis presents an experiment based methodology for characterizing the properties of the arithmetic pipelines We also measure the global and shared memory latency and bandwidth of these machines and validate the hardware characteristics presented in CUDA programming guide We hope that the insights from this work will be useful

for improving the analysis and performance optimization of CUDA programs
