Lucyszyn,Institution of Electrical Engineers,2001-11-30 This book gives an in depth account of GaAs InP and SiGe technologies and describes all the key techniques for the design of amplifiers ranging from filters and data converters to image oscillators mixers switches variable attenuators phase shifters integrated antennas and complete monolithic transceivers      **Measurements for Competitiveness in Electronics** ,1993 Identifies currently unmet measurement needs most critical for the U S electronics industry to compete successfully worldwide Includes role of measurements in competitiveness overview of U S electronics electrical equipment industries Nine subfields of electronics are covered semiconductors magnetics superconductors microwaves lasers optical fiber communications optical fiber sensors video electromagnetic compatibility Extensive references Charts tables graphs

**Principles of Modern Radar** Jerry Eaves,Edward Reedy,2012-12-06 This book Principles of Modern Radar has as its genesis a Georgia Tech short course of the same title This short course has been presented annually at Georgia Tech since 1969 and a very comprehensive set of course notes has evolved during that seventeen year period The 1986 edition of these notes ran to 22 chapters and all of the authors involved except Mr Barrett were full time members of the Georgia Tech research faculty After considerable encouragement from various persons at the university and within the radar community we undertook the task of editing the course notes for formal publication The contents of the book that ensued tend to be practical in nature since each contributing author is a practicing engineer or scientist and each was selected to write on a topic embraced by his area s of expertise Prime examples are Chaps 2 5 and 10 which were authored by E F Knott G W Ewell and N C Currie respectively Each of these three researchers is recognized in the radar community as an expert in the technical area that his chapter addresses and each had already authored and published a major book on his subject Several other contributing authors including Dr Bodnar Mr Bruder Mr Corriher Dr Reedy Dr Trebits and Mr Scheer also have major book publications to their credit      **Microwave Measurements** R.J. Collier,A.D. Skinner,2007-10-24 This book includes a survey of the theory of current microwave circuits as well as a description of the techniques for the measurement of power spectrum attenuation circuit parameters and noise measurements of antenna characteristics free fields modulation and

dielectric parameters      Passive RF and Microwave Integrated Circuits Leo Maloratsky,2003-12-01 The growth in RF and wireless mobile computing devices that operate at microwave frequencies has resulted in explosive demand for integrated circuits capable of operating at such frequencies in order to accomplish functions like frequency division phase shifting attenuation and isolators and circulators for antennas This book is an introduction to such ICs combining theory and practical applications of those devices In addition to this combined theory and application approach the author discusses the critical importance of differing fabrication materials on the performance of ICs at different frequencies This is an area often overlooked when choosing ICs for RF and microwave applications yet it can be a crucial factor in how an IC performs in a given application Gives reader a solid background in an increasingly important area of circuit design Emphasis on combination of theoretical discussions with practical application examples In depth discussion of critical but often overlooked topic of different fabrication material performances at varying frequencies      **Microwaves** ,1977      *Electron-devices Research: Consolidated Quarterly Status Reports* Stanford University Stanford Electronics Laboratories,1958      Fiftieth Anniversary, 1912-1962 Institute of Radio Engineers,1962      *Active Electronic Component Handbook* Charles A. Harper,Harold C. Jones,1996 Complete with coverage of the latest microwave and electro optic components the new edition of this classic reference meets the needs of all engineers who design manufacture and use active components in all categories of electronic systems Includes data on the full range of semiconductors guidelines for speed power density cost tradeoffs architectures and noise reduction techniques plus sections on microprocessors and microcontrollers 700 illustrations      Proceedings of ...
