Bringing Bayesian Models to Life Mevin B. Hooten, Trevor Hefley, 2019-05-15 Bringing Bayesian Models to Life empowers the reader to extend enhance and implement statistical models for ecological and environmental data analysis We open the black box and show the reader how to connect modern statistical models to computer algorithms These algorithms allow the user to fit models that answer their scientific questions without needing to rely on automated Bayesian software We show how to handcraft statistical models that are useful in ecological and environmental science including linear and generalized linear models spatial and time series models occupancy and capture recapture models animal movement models spatio temporal models and integrated population models Features R code implementing algorithms to fit Bayesian models using real and simulated data examples A comprehensive review of statistical models commonly used in ecological and environmental science Overview of Bayesian computational methods such as importance sampling MCMC and HMC Derivations of the necessary components to construct statistical algorithms from scratch Bringing Bayesian Models to Life contains a comprehensive treatment of models and associated algorithms for fitting the models to data We provide detailed and annotated R code in each chapter and apply it to fit each model we present to either real or simulated data for instructional purposes Our code shows how to create every result and figure in the book so that readers can use and modify it for their own analyses We provide all code and data in an organized set of directories available at the authors websites

Sutradhar, 2016-06-15 This proceedings volume contains eight selected papers that were presented in the International Symposium in Statistics ISS 2015 On Advances in Parametric and Semi parametric Analysis of Multivariate Time Series Spatial temporal and Familial longitudinal Data held in St John s Canada from July 6 to 8 2015 The main objective of the ISS 2015 was the discussion on advances and challenges in parametric and semi parametric analysis for correlated data in both continuous and discrete setups Thus as a reflection of the theme of the symposium the eight papers of this proceedings volume are presented in four parts Part I is comprised of papers examining Elliptical t Distribution Theory In Part II the papers cover spatial and temporal data analysis Part III is

focused on longitudinal multinomial models in parametric and semi parametric setups Finally Part IV concludes with a paper on the inferences for longitudinal data subject to a challenge of important covariates selection from a set of large number of covariates available for the individuals in the study

Hierarchical Modelling for the Environmental Sciences James Samuel Clark, Alan E. Gelfand, 2006 New statistical tools are changing the ways in which scientists analyze and interpret data and models Many of these are emerging as a result of the wide availability of inexpensive high speed computational power In particular hierarchical Bayes and Markov Chain Monte Carlo methods for analysis provide consistent framework for inference and prediction where information is heterogeneous and uncertain processes are complex and responses depend on scale Nowhere are these methods more promising than in the environmental sciences Models have developed rapidly and there is now a requirement for a clear exposition of the methodology through to application for a range of environmental challenges
