Edwards, Emanuele Naboni, 2013-08-22 This third edition of *Green Buildings Pay* presents new evidence and new arguments concerning the institutional and business case that can be made for green design. The green argument has moved a long way forward since the previous edition and this fully updated book addresses the key issues faced by architect, engineer and client today. *Green Buildings Pay: Design, Productivity and Ecology* examines through a range of detailed case studies how different approaches to green design can produce more sustainable patterns of development. These cases are examined from three main perspectives: that of the architect, the client and the user. Completely revised with all new chapters, cases, sections and introductory material, the third edition presents over 20 new researched case studies drawn from the UK, Europe and the USA, written in collaboration with the architects, engineers, clients and user groups. Examples of office and educational buildings of high sustainable and high architectural quality, an exploration of the architectural innovations that have been driven by environmental thinking such as the new approaches to the design of building facades, roofs and atria, cases which demonstrate current practice in the area of energy eco retrofits of existing buildings, documentation of the benefit impact assessment schemes such as LEED and BREEAM have had upon client expectations and on design approaches over the past decade, beautiful full color illustrations throughout. In the fast evolving arena of green building, the book shows how architects are reshaping their practices to deal with ever more demanding energy standards and better informed users and corporate clients. *Building Services Journal*, 2007 *The Architects' Journal*, 2003 **Directory of British Associations & Associations in Ireland**, 2005 *The Director*, 2008-08 *Better Places to Work* Great Britain. Commission for Architecture and the Built Environment, Llewelyn Davies Yeang (Firm), 2005 *Better Places to Work* is concerned with those elements of the design and development of workplaces that the planning system can influence. It explores issues around location, the public realm, architecture and linkages. It is based on the principle that well designed, accessible and pleasant living and working environments are one of the key requirements for creating sustainable communities as set out in *The Sustainable Communities Plan: Building for the Future*. The authors believe that it is important to get new development right given the growth of the employment sector and that poor planning and design risk a return to some of the mistakes made in the past. *Better Places to Work* demonstrates that badly located and designed places of work are not only bad for the wider environment, they are also bad for business. Evidence collated by and for CABI shows that well planned workplaces are good for business productivity and efficiency, good for recruitment, retention and employee satisfaction and good for the balance sheet: they are much more cost effective over the lifetime of the building. It focuses on ten exemplar developments from around England and uses case studies to offer guidance to all those involved in all stages of the development process. This includes designers and developers, local planning authorities, property agents and all those who occupy business premises. As a challenge and inspiration to everybody within the development industry, this guide draws on lessons of success stories to show how the planning for our workplaces can be improved for the benefit of all involved. *Encyclopedia of Architectural*
