Cybersecurity for Critical Infrastructure Protection via Reflection of Industrial Control Systems Lyudmila Sukhostat, 2022-11-15 Although cybersecurity is something of a latecomer on the computer science and engineering scene there are now inclinations to consider cybersecurity a meta discipline Unlike traditional information and communication systems the priority goal of the cybersecurity of cyber physical systems is the provision of stable and reliable operation for the critical infrastructures of all fundamental societal functions and activities This book *Cybersecurity for Critical Infrastructure Protection via Reflection of Industrial Control Systems* presents the 28 papers delivered at the NATO Advanced Research Workshop ARW hosted in Baku Azerbaijan and held online from 27 29 October 2021 The inspiration and motivation behind the ARW stem from the growth in large scale cyber attacks the rising degree of complexity and sophistication of advanced threats and the need to protect critical infrastructure by promoting and building a resilient system to promote the well being of all citizens The workshop covered a wide range of cybersecurity topics permeating the main ideas concepts and paradigms behind ICS and blended with applications and practical exercises with overtones to IoT IIoT ICS artificial intelligence and machine learning Areas discussed during the ARW included the cybersecurity of critical infrastructures its educational and research aspects vulnerability analysis ICS PLC SCADA test beds and research intrusion detection mitigation and prevention cryptography digital forensics for ICS PLCs Industry 4 0 robustness and trustworthiness and Cyber Fortress concept infused with practical training Investigating theoretical and practical problems involving the security of critical and essential infrastructure of each segment of contemporary societies the book will be of interest to all those whose work involves cybersecurity

New Trends in Mechanism and Machine Science Giulio Rosati, Alessandro

Gasparetto, Marco Ceccarelli, 2024-08-09 This book gathers the proceedings of the 9th European Conference on Mechanism Science EuCoMeS which was held in Padua Italy on September 18-20, 2024 under the patronage of IFToMM. It presents the latest research and industrial applications in the areas of mechanism science, robotics and dynamics. The contributions cover such topics as computational kinematics, control issues in mechanical systems, mechanisms for medical rehabilitation, mechanisms for minimally invasive techniques, cable robots, design issues for mechanisms and robots, and the teaching and history of mechanisms. Written by leading researchers and engineers and selected by means of a rigorous international peer review process, the papers highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations.

Sun Tracking and Solar Renewable Energy Harvesting Gerro Prinsloo, Robert Dobson, 2015-11-02 Free to download eBook on Practical Solar Tracking Design. Solar Tracking, Sun Tracking, Sun Tracker, Solar Tracker, Follow Sun, Sun Position calculation, Azimuth, Elevation, Zenith, Sun following, Sunrise, Sunset, Moon phase, Moonrise, Moonset calculators. In harnessing power from the sun through a solar tracker or solar tracking system, renewable energy system developers require automatic solar tracking software and solar position algorithms. On-axis sun tracking systems such as the altitude-azimuth dual-axis or multi-axis solar tracker systems use a sun tracking algorithm or ray tracing sensors or software to ensure the sun's passage through the sky is traced with high precision in automated solar tracker applications right through summer solstice, solar equinox, and winter solstice. Eco-Friendly and Environmentally Sustainable Micro-Combined Solar Heat and Power (mCHP, mCCHP, mCHCP) with Microgrid Storage and Layered Smartgrid Control towards Supplying Off-Grid Rural Villages in developing BRICS countries such as Africa, India, China, and Brazil. Off-grid rural villages and isolated islands areas require mCHP and trigeneration solar power plants and associated isolated smart microgrid solutions to serve the community energy needs. This article describes the development progress for such a system, also referred to as solar polygeneration. The system includes a sun tracker mechanism wherein a parabolic dish or lenses are guided by a light-sensitive mechanism in a way that the solar receiver is always at right angle to the solar radiation. Solar thermal energy is then either converted into electrical energy through a free-piston Stirling or stored in a thermal storage container. The project includes the thermodynamic modeling of the plant in Matlab Simulink as well as the development of an intelligent control approach that includes smart microgrid distribution and optimization. The book includes aspects in the simulation and optimization of stand-alone hybrid renewable energy systems and co-generation in isolated or islanded microgrids. It focusses on the stepwise development of a hybrid solar-driven micro-combined cooling, heating, and power (mCCHP) compact trigeneration, polygeneration, and thermal energy storage (TES) system with intelligent weather prediction, weak-ahead scheduling, time horizon, and look-ahead dispatch on integrated smart microgrid distribution principles. The solar harvesting and solar thermodynamic system includes an automatic sun tracking platform based on a PLC-controlled mechatronic sun tracking system that follows the sun progressing across the sky. An intelligent energy management and

adaptive learning control optimization approach is proposed for autonomous off grid remote power applications both for thermodynamic optimization and smart micro grid optimization for distributed energy resources DER The correct resolution of this load following multi objective optimization problem is a complex task because of the high number and multi dimensional variables the cross correlation and interdependency between the energy streams as well as the non linearity in the performance of some of the system components Exergy based control approaches for smartgrid topologies are considered in terms of the intelligence behind the safe and reliable operation of a microgrid in an automated system that can manage energy flow in electrical as well as thermal energy systems The standalone micro grid solution would be suitable for a rural village intelligent building district energy system campus power shopping mall centre isolated network eco estate or remote island application setting where self generation and decentralized energy system concepts play a role Discrete digital simulation models for the thermodynamic and active demand side management systems with digital smartgrid control unit to optimize the system energy management is currently under development Parametric simulation models for this trigeneration system polygeneration poligeneration quadgeneration are developed on the Matlab Simulink and TrnSys platforms In terms of model predictive coding strategies the automation controller will perform multi objective cost optimization for energy management on a microgrid level by managing the generation and storage of electrical heat and cooling energies in layers Each layer has its own set of smart microgrid priorities associated with user demand side cycle predictions Mixed Integer Linear Programming and Neural network algorithms are being modeled to perform Multi Objective Control optimization as potential optimization and adaptive learning techniques
