Spyropoulos,2003-06-29 In recent years machine learning has made its way from artificial intelligence into areas of administration commerce and industry Data mining is perhaps the most widely known demonstration of this migration complemented by less publicized applications of machine learning like adaptive systems in industry financial prediction medical diagnosis and the construction of user profiles for Web browsers This book presents the capabilities of machine learning methods and ideas on how these methods could be used to solve real world problems The first ten chapters assess the current state of the art of machine learning from symbolic concept learning and conceptual clustering to case based reasoning neural networks and genetic algorithms The second part introduces the reader to innovative applications of ML

techniques in fields such as data mining knowledge discovery human language technology user modeling data analysis discovery science agent technology finance etc   Coherence David Ramírez,Ignacio Santamaría,Louis Scharf,2023-01-01 This book organizes principles and methods of signal processing and machine learning into the framework of coherence The book contains a wealth of classical and modern methods of inference some reported here for the first time General results are applied to problems in communications cognitive radio passive and active radar and sonar multi sensor array processing spectrum analysis hyperspectral imaging subspace clustering and related The reader will find new results for model fitting for dimension reduction in models and ambient spaces for detection estimation and space time series analysis for subspace averaging and for uncertainty quantification Throughout the transformation invariances of statistics are clarified geometries are illuminated and null distributions are given where tractable Stochastic representations are emphasized as these are central to Monte Carlo simulations The appendices contain a comprehensive account of matrix theory the SVD the multivariate normal distribution and many of the important distributions for coherence statistics The book begins with a review of classical results in the physical and engineering sciences where coherence plays a fundamental role Then least squares theory and the theory of minimum mean squared error estimation are developed with special attention paid to statistics that may be interpreted as coherence statistics A chapter on classical hypothesis tests for covariance structure introduces the next three chapters on matched and adaptive subspace detectors These detectors are derived from likelihood reasoning but it is their geometries and invariances that qualify them as coherence statistics A chapter on independence testing in space time data sets leads to a definition of broadband coherence and contains novel applications to cognitive radio and the analysis of cyclostationarity The chapter on subspace averaging reviews basic results and derives an order fitting rule for determining the dimension of an average subspace These results are used to enumerate sources of acoustic and electromagnetic radiation and to cluster subspaces into similarity classes The chapter on performance bounds and uncertainty quantification emphasizes the geometry of the Cram r Rao bound and its related information geometry

    Machine Learning, ECML- … ,1997   A Novel Ontology and Machine Learning Driven Hybrid Clinical Decision Support Framework for Cardiovascular Preventative Care Kamran Farooq,2016-06-16 Doctoral Thesis Dissertation from the year 2015 in the subject Computer Sciences Artificial Intelligence grade University of Stirling Computing Science and Mathematics language English abstract Clinical risk assessment of chronic illnesses is a challenging and complex task which requires the utilisation of standardised clinical practice guidelines and documentation procedures in order to ensure consistent and efficient patient care Conventional cardiovascular decision support systems have significant limitations which include the inflexibility to deal with complex clinical processes hard wired rigid architectures based on branching logic and the inability to deal with legacy patient data without significant software engineering work In light of these challenges we are proposing a novel ontology and machine learning driven hybrid clinical decision support framework for cardiovascular

preventative care An ontology inspired approach provides a foundation for information collection knowledge acquisition and decision support capabilities and aims to develop context sensitive decision support solutions based on ontology engineering principles The proposed framework incorporates an ontology driven clinical risk assessment and recommendation system ODCRARS and a Machine Learning Driven Prognostic System MLDPS integrated as a complete system to provide a cardiovascular preventative care solution The proposed clinical decision support framework has been developed under the close supervision of clinical domain experts from both UK and US hospitals and is capable of handling multiple cardiovascular diseases   **Modeling and Simulation for Military Applications** William K.
