Proceedings of the International Conference on Applications of Machine Intelligence and Data Analytics (ICAMIDA 2022) Sharvari Tamane,Suddhasheel Ghosh,Sonal Deshmukh,2023-05-01 This is an open access book As on date huge volumes of data are being generated through sensors satellites and simulators Modern research on data analytics and its applications reveal that several algorithms are being designed and developed to process these datasets either through the use of sequential and parallel processes In the current

scenario of Industry 4.0 data analytics artificial intelligence and machine learning are being used to support decisions in space and time. Further, the availability of Graphical Processing Units (GPUs) and Tensor Processing Units (TPUs) has enabled the processing of these datasets. Some of the applications of Artificial Intelligence, Machine Learning, and Data Analytics are in the domains of Agriculture, Climate Change, Disaster Prediction, Automation in Manufacturing, Intelligent Transportation Systems, Health Care, Retail, Stock Market, Fashion Design, etc. The international conference on Applications of Machine Intelligence and Data Analytics aims to bring together faculty members, researchers, scientists, and industry people on a common platform to exchange ideas, algorithms, knowledge based on processing hardware, and their respective application programming interfaces (APIs).

Tiny Machine Learning Techniques for Constrained Devices Khalid El-Makkaoui, Ismail Lamaakal, Ibrahim Ouahbi, Yassine Maleh, Ahmed A. Abd El-Latif, 2026-01-30

Tiny Machine Learning Techniques for Constrained Devices explores the cutting edge field of Tiny Machine Learning (TinyML), enabling intelligent machine learning on highly resource-limited devices such as microcontrollers and edge Internet of Things (IoT) nodes. This book provides a comprehensive guide to designing, optimizing, securing, and applying TinyML models in real-world constrained environments. Real-Time C++ Christopher Kormanyos, 2021-07-14

With this book, Christopher Kormanyos delivers a highly practical guide to programming real-time embedded microcontroller systems in C. It is divided into three parts plus several appendices. Part I provides a foundation for real-time C by covering language technologies including object-oriented methods, template programming, and optimization. Next, part II presents detailed descriptions of a variety of C components that are widely used in microcontroller programming. It details some of C's most powerful language elements such as class types, templates, and the STL to develop components for microcontroller register access, low-level drivers, custom memory management, embedded

containers multitasking etc Finally part III describes mathematical methods and generic utilities that can be employed to solve recurring problems in real time C The appendices include a brief C language tutorial information on the real time C development environment and instructions for building GNU GCC cross compilers and a microcontroller circuit For this fourth edition the most recent specification of C 20 is used throughout the text Several sections on new C 20 functionality have been added and various others reworked to reflect changes in the standard Also several new example projects ranging from introductory to advanced level are included and existing ones extended and various reader suggestions have been incorporated Efficiency is always in focus and numerous examples are backed up with runtime measurements and size analyses that quantify the true costs of the code down to the very last byte and microsecond The target audience of this book mainly consists of students and professionals interested in real time C Readers should be familiar with C or another programming language and will benefit most if they have had some previous experience with microcontroller electronics and the performance and size issues prevalent in embedded systems programming
